<b>Legal name</b>
Fondant icing
<b>Ingredients list</b>
Sugar (EU and non-EU), Glucose syrup, Palm oil, Colour: E161b, Emulsifier: E471, Humectant: E422, Stabilisers: E415, E466; Preservative: E202, Flavouring.
<b>Made in a factory that handles nut ingredients (Almonds)</b>

Composition	Typical figures %	Countries of origin
Sugar	75 - 85	Algeria, Belgium, Croatia, Denmark, France, Germany, Guatemala, Mauritius, Netherlands, Portugal, United Kingdom
Glucose Syrup	5 - 10	UK, Netherlands
Palm Oil	5 - 10	Colombia, Costa Rica, Ecuador, Guatemala, Honduras, Indonesia, Malaysia, Papua New Guinea, Peru, Solomon Islands
Water	<5	UK
Colour: Lutein (E161b)	<5	UK
Emulsifier: Mono- and Di-Glycerides of Fatty Acids (E471)	<1	Malaysia, Indonesia, Papua New Guinea, Solomons Islands (Manufactured in Denmark, Malaysia, Spain)
Humectant: Glycerol (E422)	<1	UK, Germany, Belgium, France, Netherlands
Stabiliser: Xanthan Gum (E415)	<1	China
Stabiliser: Cellulose Gum (E466)		France
Preservative: Potassium Sorbate (E202)	<0.1	China
Flavouring (Natural)	<0.1	UK

<b>Colour pigment</b>	
E161b	48.012ppm

# Product Technical Specification

Palm oil details	
Contains components sourced from Palm Oil/Palm Kernel Oil and/ or derivatives	Palm Oil and E471 derived from palm oil
RSPO information	Palm Oil - RSPO Segregated certified sustainable E471 - RSPO MB certified sustainable Finished product is RSPO MB supply chain certified.

Nutritional	
Method: Calculated	Typical figures per 100 g
Energy (kJ/kcal)	1727 / 408
Fat (g)	6.7
of which saturates (g)	3.6
Carbohydrates (g)	87
of which sugars (g)	82
Protein (g)	0.0
Salt (g)	0.03

Dietary information		
	Suitable for	Comments
Vegetarians	Yes	
Vegans	Yes	
Kosher	Yes	Certified. Certificate available on request.
Halal	Yes	Certified. Certificate available on request.

Genetically modified materials
To the best of our knowledge, this product is not made from genetically modified material and does not use processing aids or additives which are genetically modified. A GM policy is available on request.

Irradiated materials
This product does not contain any ingredients that have been treated with ionising radiation.

Nanomaterials
This product does not contain any engineered nanomaterials.

Shelf life: unopened
15 months from date of manufacture.

Shelf life: opened
Once opened, it is the responsibility of our customers to establish the maximum permitted time until all material should be used. This will depend on their specific environment, practices and procedures.

Appearance	Organoleptic	Yellow coloured fondant Icing. Free from any visible lumps or specks.
Flavour	Organoleptic	Sweet vanilla.
Texture	Organoleptic	Smooth to slightly powdery and soft to the bite leading to a pasty, sticky mouth coating which then dissolves away.
Aroma	Organoleptic	Sweet vanilla.

# Product Technical Specification

## Brief process description

Milled sugar is combined with fat, glucose, gum, colour and flavouring to give a ready to use fondant icing which is perfect for decorating cakes and/or modelling. The paste is packed, checkweighed and metal detected.

## Overview of HACCP - available upon request

## Metal detection

Checked at start up, every hour and end of each packing run: 2.5mm Ferrous, 4.0mm Non-Ferrous, 5.0mm Stainless Steel test pieces

## Sieves

Not appropriate for this product type.

## Packaging

Printed red film with clear window (12µm PET-Alox/ 60µm PE evoh PE-HB), a label applied to back of pack. Packed 12 per corrugated cardboard shelf ready outer case. Outer case label applied. 38 cases per layer, 6 layers high, 228 cases per pallet. All pallets shrink/stretched wrapped.

## Recycling information

Film - Plastic not currently recycled  
SRP Outer - Card widely recycled

## Production date code

5 digit code. 1st & 2nd = year; 3-5 = day of the year e.g 26/08/2016 = 16238  
In the event of any issues, please quote information as per example below:

Best before end  
date: MMM YY

Production date code: 5  
digit code 1<sup>st</sup> & 2<sup>nd</sup> =  
year, 3<sup>rd</sup> - 5<sup>th</sup> = day of  
year

# Product Technical Specification

Health & safety data		
Physical Appearance	Yellow coloured fondant Icing.	
Ingredients	See ingredients section of the specification.	
Intended use	For bakery use.	
Storage & Handling	See specification.	
Occupational exposure hazards	None, under normal conditions of use at room temperature. Avoid eye contact.	
Fire/explosion hazard	The product will burn if ignited, but under normal conditions of use, will present no fire risk.	
First Aid	Eyes:	Flush with plenty of water. Seek medical advice if needed.
	Skin:	Wash with soap and water.
	Ingestion:	No hazard under normal conditions of use.
	Inhalation:	No hazard under normal conditions of use.
Spillage	Wash area with detergent and water to avoid slip hazard.	
Disposal of waste	Normal waste disposal in accordance with local and national laws.	
Other hazards	None known.	
Protective clothing	Normal for food handling.	

# Product Technical Specification

## Fondant Icing Icing handling and usage instructions

Fondant Icing icing is typically made from icing sugar, glucose syrup, vegetable oil, stabilisers, glycerine, emulsifiers, preservative and flavouring; colours may also be added. (Refer to the ingredients list).

## Possible applications:

Sheeting and covering, moulding, basic modelling and cutting shapes.

## Recommended storage

Fondant Icing icing should be stored in dry conditions between 5°C and 18°C, away from heat sources and odorous materials. The shelf life of icing is recommended provided the packaging remains unopened and product is stored correctly. It is the responsibility of our customers to carefully consider and establish that the icing lasts for the required shelf life of their end products.

## Recommended handling and processing:

### a) Opening

Once opened, Fondant Icing icing should not be exposed to air for prolonged periods as product will harden and also potentially become prone to microbiological contamination.

Once opened, it is the responsibility of our customers to establish the maximum permitted time until all material should be used. This will depend on their specific environment, practices and procedures.

### b) Unused material

Any unused material should immediately be wrapped in close fitting polythene, expelling as much air as possible; then stored in an airtight container for later use.

It is the responsibility of our customers to carefully consider and establish that any re-wrapped material is fit for purpose when using it.

### c) Handling

For best results before using the icing, ensure it's tempered to room temperature.

Using the heels of both hands, gently knead the paste to warm it and to improve elasticity and pliability.

### d) Rolling out

Roll out the Fondant Icing icing on a non-stick surface using a rolling pin and icing sugar to dust the work surface, avoid using an excess of icing sugar as it will cause icing to dry out and crack.

Never roll out cold icing, always ensure you knead the product before rolling out.

Avoid the use of flour to prevent sticking or aid sheeting, as this will potentially introduce both a microbiological and allergen issue.

## Product Technical Specification

### e) Placing fondant Icing on cake

Gently lift the rolled out layer of Fondant Icing icing with a rolling pin or with both hands, taking care not to stretch or tear it, position carefully on cake.

Smooth and shape the icing on cake top and sides until it feels silky to the touch, immediately trim any excess icing flush with the base of the cake using a sharp knife.

### f) Adherence on cakes

Alcohol, clear spirit or cooled boiled water is recommended to be applied to marzipan layer, to aid adherence of icing layer onto the first marzipan layer.

If covering onto a sponge cake, a thin coating of butter cream is recommended to be applied to it to aid adherence of icing layer onto the cake.

### g) Adherence of models

Alcohol, clear spirit or cooled boiled water is recommended to aid the adherence of any models to the icing layer.

### Rework

Ensure rework is not overexposed to air or moisture causing drying out or stickiness. Where material is reworked this should not be contaminated with cake crumb or jam.

Rework material should be kept in a cool dry place, wrapped well and used within a short period of time.

It is the responsibility of our customers to carefully consider and establish that any re-work material is fit for purpose and that the maximum permitted time until all material should be used when using it, depending on their specific environment, practices and procedures.

### Water activity

The imbalance of water activity between the various components of a cake will potentially cause moisture migration to the icing layer. This should be considered during the development of any products.

### Things to be aware of:

Fondant Icing icing may dry out or crack if the icing has been over exposed to air during or prior to handling, too much dusting sugar will also cause drying out and cracking of the icing.

Fondant Icing icing may become sticky if it has been exposed to moisture during or prior to handling. This may be caused by an imbalance of water activity between various cake layers.

During manufacture, best practices are carried out to ensure that there is little or no variation in the pre-coloured Renshaw Professional Fondant Icing icing range however; where natural colours are used, there can be some natural variation in colour.
